

## Morrison Dual Turning Custom Drive Assembly

**INDUSTRY:** Personal Care    **OPERATING SPEED:** 140 to 180 CPM    **CONTAINER:** 2.5oz and 5oz

### Customer Container Handling Challenge:

The customer needed to turn the container 180 degrees prior to cartoning so the label was facing outward. Space was limited for installation of the equipment.

### Morrison Solution:

Our solution is a dual timing screw drive system that turns the containers 180 degrees, bump leading to bump trailing, through the screws. The footprint of this system is small in order to accommodate the space constraints.

The system was equipped with “NO TOOLS” Quick Change timing screws to run the 2.5oz container size as well at the 5oz container size on the same system.

**Construction:** Black Anodized Aluminum
